DESIGN & CONSULTATION AGREEMENT

Pacific Audio & Communications, Inc. welcomes the opportunity to work with you through the design and planning of your Home Entertainment Communications and Control System. To ensure the System satisfies your needs and enhances the design of your home, Pacific Audio & Communications, Inc. uses the following design and consultation approach:

PROJECT REVIEW:

The first step in the design process, The Project Review, familiarizes us with the architectural and interior design elements of your home. It also supplies the technical information we use to determine the best approach for wiring your home and installing your System.

A complete and up-to-date set of architectural site plans and artist conceptual drawings should be sent to us. We also request that you complete our Project Review & Client Preference Questionnaire. This questionnaire helps us understand the types of products your System will manage. We analyze these materials and, if appropriate, survey your home site. We also consult with your builder, architect, interior designer, and others involved the design and/or construction of your home to establish an efficient working plan and schedule.

CLIENT PREFERENCE INTERVIEW:

After the Project Review, we will conduct your Client Preference Interview. At this meeting we discuss specific System's features and capabilities, aspects of your projected homeowners' lifestyle which should be considered during System design, and unique features of your home. This Interview lasts two to three hours. All decision-making persons should be present.

PROJECT PROPOSAL AND PRELIMINARY SYSTEM DESIGN:

After the Project Review and Client Preference Interview, we will prepare a customized Project Proposal and Preliminary System Design. This document includes a custom design for your systems; descriptions of proposed features; system diagrams using CAD layouts for all wire runs and locations of Audio/Video devices for rough-in; CAD development of equipment details and a "**CONCEPTUAL**" cabinet layout for said equipment. The total investment for your Systems and details of Pacific Audio & Communications Inc.'s warranty, service and maintenance programs is also included.

PROJECT MANAGEMENT:

Project management will consist of field site visits for documentation delivery and review with homeowner; site rough-in walk-through with homeowner and Others); materials drop off and review where needed; rough-in stage check ups (during rough-in by Others for quality control issues and questions); and a final rough-in check-up prior to dry-wall. (If Design & Engineering and Project Management contract was for rough-in purposes only then the contract will be complete at this stage.)

The initial investment for conducting the Project Review and Client Preference Interview, and for preparing the Project Proposal and Preliminary System Design, is \$_____. The preliminary design price includes one major change to the system layout. We will notify you if we anticipate running over this allotted time. If project is accepted we will credit the fee back to your account. (Changes may be out of our hands due to construction limitations, time-line or homeowner's needs and wants.)

These documents are the intellectual property of Pacific Audio & Communications, Inc, and once purchased can be used at the owner's discretion with no recourse.

I acknowledge that I have read and clearly understand the terms and conditions set forth in this Agreement.
